"The fact of the matter is that it is a matter of record that it was known that vaccination produced encephalitis since 1926." The authors stated, "In regions in which there is no organized vaccination of the population, general paralysis is rare. ... It is impossible to deny a connection between vaccinations and the encephalitis (brain damage) which follows it." Vaccines have been linked to seizures, convulsions and epilepsy.*

- NA, "AIDS Vaccines: Is **Optimism Justified**? *Fortschr Med*, Jul 20, 1989, 107(21):13. [Sounds a bit pessimistic!]
- [Many researchers feel that it is literally impossible to make an AIDS vaccine, but they are still testing the experimental ones on real people ... human "guinea pigs".]

[The hepatitis B vaccination is given to protect the liver from disease - hepatitis, right. DNA antibodies means very possible auto-immunity again from vaccinations.]
